

AMENDMENTS TO THE SPECIFICATION:

Please amend the indicated paragraphs of the specification in accordance with the amendments indicated below.

Pages 5-6: Paragraph bridging pages 5-6, amend as indicated below:

Said tapes 10, upon being unwound, travel at different angles to the horizontal to guide rolls 2 and pass between said rolls, with the tapes 10 being combined in the process to a multilayered strand 8. Strand 8 is gripped by a pair of conveying rolls 3 and drawn to a cutting device 4. Having reached the end of the transport path, there is severed from the strand 8 by means of the cutting device 4 one multilayered stack 9 at a time, consisting of loose administration forms superimposed upon each other in exact alignment, and filled into a dispensing container 5, which is held ready, after the dispenser 5 ~~having~~ having previously been automatically brought to the filling position by means of a conveyor device (not shown). In the process, the dispenser 5 is loaded with at least one stack 9. Depending on the material and on the task to be solved, a dispensing container 5 may also be loaded successively with a plurality of stacks 9. The loaded container is then transported by means of the conveyor device 11.
